

LEAN HIGH MOTION SYSTEM

Engineered as a natural
extension of the FANUC robot

Not an add-on

A fully integrated energy supply solution designed for performance, reliability, and global standardization.

Key Features

- Seamless integration
- Controlled motion behavior
- Closed & protected system
- Reduced downtime

Scan for full
system details

Engineering Performance.

Global Reliability.

Designed for **High-Motion Industrial** Applications

Performance

- Predictable motion behavior
- Optimized routing stability
- Defined interference compliance

Durability

- Closed and sealed system
- Protection against dust and wear
- High-flex cables for long lifecycle

Integration

- No robot-specific adjustments
- Clean mechanical integration
- Global standard consistency

Fast. Efficient. Reliable.

Designed for minimal downtime, the system ensures rapid maintenance with $MTTR \leq 7$ minutes (MH) and ≤ 15 minutes (CSW), supported by a simplified service process that keeps operations running smoothly.
